Work logs [After Progress report4]

Date	Hours	Description of Work Done
19/3/2026	20 min	Analysed the bio field issue — reviewed socialController and authController to identify why bio was not displaying on the profile page.
	45 min	Started working on bio feature — added bio field in user.js, updated authController and socialController to include bio in get profile response, tested bio display on profile page.
	30 min	Conducted manual testing across 8 test cases: (1) Login → Go to /login, (2) Profile shows bio → Go to /dashboard, (3) Profile photo → Upload photo in /settings, (4) Change password → Go to /settings → Change Password, (5) Explore shows all books → Go to /explore, (6) Home feed → Go to /newdashboard, (7) Follow/Unfollow → Visit another user profile, (8) Like a book → Click heart on any book.
	2 hr	Implemented three writing modes in Book Editor: (1) Write Yourself — user writes entire chapter manually and saves it, (2) Full AI Generation — AI writes complete chapter from scratch, (3) Half Human + Half AI — user writes opening lines and AI continues in the same style. Added completeChapterContent function in aiController.js, registered new endpoint /complete-chapter-content in aiRoutes.js, updated ChapterEditorTab.jsx with new states, handlers, and mode selector UI buttons, wired all props and API calls in EditorPage.jsx. Successfully tested all three modes.

	2 hr	Updated Profile Page — replaced old plain layout with NewDashboardLayout so sidebar navigation (Home, Explore, Threads, Messages, Profile, Settings) is now visible. Replaced old square image grid with BookCard component for consistent card display with click-to-read. Added CreateBookModal with state and handler so users can create a new eBook directly from profile page. Profile still shows avatar, name, email, bio, stats, and Follow/Unfollow button conditionally.
	45 min	Fixed avatar display bug in NewDashboardLayout — profile picture was not showing in sidebar and topbar. Root cause: user.avatar in localStorage stored only relative path like /uploads/xyz.jpg without base URL. Fix: created avatarUrl helper variable that prepends http://localhost:8000 if path does not already start with http. Applied fix to all avatar image locations inside layout component.
	20 min	Updated UI of Edit Profile page — improved layout and styling of the edit profile section in Settings.
	20 min	Solved image error in Stories — fixed bug in Add to Story feature where image was not being added correctly.
	15 min	Added Like button with heart icon under book card component on Profile page.
	45 min	Updated Dark Mode across the application — fixed dark mode styling across multiple pages.
20/3/2026	3 hr	Built complete Threads feature from scratch — backend and frontend. Backend: created Thread model in MongoDB (stores thread text, up to 5 images, likes, comments with user references), built threadController with 5 API functions (get all threads, create thread, like/unlike, add comment, delete thread), created threadRoutes with Multer image upload middleware (up to 5 images, max 5MB each), wired into main server. Frontend: rewrote ThreadsPage replacing old hardcoded mock data with real API calls, added photo upload with preview, real like/unlike with optimistic updates, comment section with real-time submit, author profile picture, name, and time-ago display.

21/3/2026	1 hr	Meeting with Khushi — discussed next changes and upcoming priorities for the project.
	2 hr	Improved Threads page UI — added full image modal for viewing thread images in full screen, updated to desktop layout, added professional sidebar, added View Profile button to navigate to thread author's profile, implemented delete button functionality so users can delete their own threads.
	2 hr	Replaced old Thread Tips + Trending Tags sidebar with AI Writing Assistant powered by Gemini AI. User types raw thought, clicks Improve with AI, and AI rewrites it in a more engaging way with correct grammar and suggests 3–5 relevant hashtags (e.g. #BookReview #Fantasy #Bookstagram). User can copy improved text or copy individual hashtags or all hashtags at once with one click.
23/3/2026	1 hr	Work on report 5 and update on github

Summary Description of work done during this reporting period:

During this period, I focused on fixing the bio field display issue by updating socialController and authController, and ran 8 manual test cases to verify core app functionality. I implemented three writing modes in the Book Editor — Write Yourself, Full AI Generation, and Half Human + Half AI — by updating aiController.js, aiRoutes.js, ChapterEditorTab.jsx, and EditorPage.jsx. I updated the Profile Page to include the new sidebar navigation via NewDashboardLayout, replaced the image grid with the BookCard component, and added a direct book creation flow via CreateBookModal. I also fixed an avatar display bug in the sidebar and topbar caused by a missing base URL in localStorage. Additionally, I made smaller UI improvements including edits to the Edit Profile page, fixed the Stories image error, added a Like button under book cards, and updated Dark Mode. I then built the entire Threads feature from scratch — both backend (Thread model, threadController, threadRoutes with Multer) and frontend (real API calls, image uploads, likes, comments, author details). The Threads page was further enhanced with a full image modal, desktop layout, professional sidebar, View Profile button, and delete functionality. Finally, I replaced the static sidebar with a Gemini AI Writing Assistant that improves thread text and suggests relevant hashtags.

Repo Check in of Implementation completed: The files and folders I have check in are as follows:

Branch: Aditi0044

- *Add bio field*
- *change authcontoller as per bio*
- *change socialContoller*
- *Add getAllBooks function in bookcontoller.js and update module*
- *update bookRoutes*
- *Add apipaths*
- *update explorepage , settingpage and profilepage*
- *update profilepage*
- *solve error and update both files*
- *now users have three options — "Write Yourself" where the user writes the entire chapter manually and saves it themselves, "Full AI Generation" where AI writes the complete chapter from scratch, and "Half Human + Half AI" where the user writes their idea or opening lines first and then AI continues and completes the chapter*
- *replaced the old square image grid with the proper BookCard component so books are displayed in a consistent card style matching the dashboard, and users can click on a book to open and read it*
- *fix: display user profile picture in sidebar and topbar*
- *update UI of edit profilepage*
- *solve image error in stories*
- *fix: add likes count with heart icon under book cards on profile page*
- *update darkmode*
- *add threads feature with real backend integration - create, like, comment, delete threads with up to 5 image uploads*
- *solve error in bookController.js*
- *Merge pull request #19 from KhushiBhatt22/Aditi_0044*
- *Merge pull request #20 from KhushiBhatt22/Aditi_0044*
- *Add view profile button*
- *solve route error*
- *threads page - full image modal, desktop layout, professional sidebar, view profile button*
- *update controller file and route file with delete comment functionality*
- *Add delete comment Ui*
- *solve error 500*
- *HideTopbar from all pages*
- *integrate AI writing assistant - improve text with Gemini AI, suggest and copy hashtags*
- *Merge pull request #21 from KhushiBhatt22/main*

AI Usage:

AI Tool Name	Version / Account Type	Specific Feature for which AI Tool was Used	Value Addition (What value did you add beyond the AI?)
ChatGPT (OpenAI)	GPT-4o, Free version	Implementing 3 writing modes in Book Editor — Write Yourself, Full AI Generation, Half Human + Half AI — added completeChapterContent in aiController.js, new route /complete-chapter-content in aiRoutes.js, updated ChapterEditorTab.jsx and EditorPage.jsx	Reviewed generated code, integrated with existing controller conventions, tested all three modes end-to-end, fixed edge cases in mode switching logic manually.
ChatGPT (OpenAI)	GPT-4o, Free version	Updating Profile Page — integrating NewDashboardLayout for sidebar navigation, replacing image grid with BookCard component, wiring CreateBookModal with state and handler	Evaluated AI output against existing component structure, ensured BookCard props matched existing data shape, verified modal state management worked correctly within the page.
ChatGPT (OpenAI)	GPT-4o, Free version	Building complete Threads feature — Thread model in MongoDB, threadController with 5 API functions, threadRoutes with Multer middleware, and rewriting ThreadsPage with real API integration, image uploads, likes, and comments	Designed MongoDB schema based on project requirements, reviewed controller functions for consistency with existing auth middleware, manually tested all 5 API endpoints and

			fixed response format issues.
ChatGPT (OpenAI)	GPT-4o, Free version	AI Writing Assistant on Threads sidebar — Gemini AI integration for improving thread text and suggesting 3–5 relevant hashtags with individual and bulk copy functionality	Designed prompt structure for Gemini to return both improved text and hashtag suggestions, implemented copy-to-clipboard for individual and bulk hashtags, integrated into existing sidebar layout.
ChatGPT (OpenAI)	GPT-4o, Free version	Debugging avatar not displaying in NewDashboardLayout sidebar and topbar — avatar path missing base URL in localStorage	Independently traced root cause to missing base URL in localStorage avatar path, designed avatarUrl helper variable fix, verified the fix across all avatar locations in the component.
