Work logs

Work logs [After Midterm]

Date	Hours	Description of Work Done
22/02/2026	2	Completed the midterm progress report. Documented the current state of the Bookstagram UI, summarized frontend components built so far, and outlined upcoming tasks for the post-midterm sprint.
23/02/2026	2	Attended team meeting to discuss post-midterm project goals. Reviewed pending frontend deliverables including the Stories feature, book feed UI, and user profile page. Shared responsibilities with teammates and agreed on individual task for the upcoming sprint.
26/02/2026	1	Researched UI design patterns for integrating an Instagram-style Stories

		feature into the Bookstagram app. Explored how to implement 24-hour expiring book stories, likes, and follower-based feed filtering. Reviewed reference apps and took design notes to guide frontend implementation.
28/02/2026	2	Worked on the Bookstagram frontend. Built the initial layout for the Stories bar component at the top of the book feed. Researched on basic UI structure for displaying circular story thumbnails with user photo and adjusted spacing and sizing.
1/02/2026	1	Reviewed and contributed to the drafting of Progress Report 2. Documented frontend work completed during the post-midterm period, updated the work log entries with accurate descriptions, and drafted the AI Usage section.
2/02/2026	1	Proofread and finalized Progress Report 2. Verified accuracy of all work log dates, hours, and descriptions. Corrected grammar and formatting issues and

		submitted the completed report.

Summary Description of work done during this reporting period:

During this reporting period, I focused on frontend research and development for the Bookstagram application. I attended the post-midterm team meeting to align on goals and divide upcoming tasks. I conducted in-depth research on implementing an Instagram-style Stories feature, including 24-hour expiry logic, likes, and follower-based feed display. Based on this research, I began building the Stories bar UI component on the book feed page. I also used ChatGPT and Claude AI to explore image generation techniques and compare prompt strategies for AI-generated story visuals. The period concluded with drafting and proofreading Progress Report 2 for final submission.

Repo Check in of Implementation completed: The files and folders I have check in are as follows:

Branch: Aditi_0044

- delete .gitignore file
- delete node modules
- Add Api
- modified profilepage.jsx
- change login.jsx
- modified app.jsx and solved error

AI Usage section:

AI Tool Name	Version / Account Type	Specific Feature for which AI Tool was Used	Value Addition (What value did you add beyond the AI?)
Chatgpt (OpenAI)	GPT 4, Free version	Research on image generation	Manually reviewed and filtered all AI-

		technique and stories feature like 24 hours view only	generated suggestions. Selected only the techniques relevant to the Bookstagram use case and re-evaluated each approach against the project's existing architecture before deciding what to implement.
Claude AI	Free version	Comparing research from chatgpt to here about image generation and prompt technique.	Cross-referenced outputs from ChatGPT and Claude AI to validate findings. Formed my own conclusions based on both sources and applied only the most practical and project-relevant prompt strategies independently, without copying responses directly.
Grammarly	Free version	Grammar and spelling correction; tone and clarity suggestions for report writing	All report content was originally written by me. Grammarly was used only as a final proofreading pass to catch typos and improve sentence clarity. The ideas, structure, and technical details were entirely my own.
